# Why i-Vidya?

**Kids creativity and eagerness to learn should not be limited by access to resources. We help them explore the technology world.**

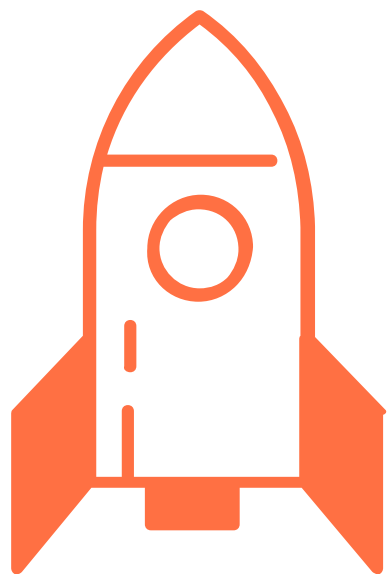

## Qualified Trainers

i-Vidya brings qualified trainers to maintain state-of-the-art curriculum, foundation programs are fully prepared in-line with technology and industry requirement.

## Opportunity

i-Vidya brings qualified trainers to maintain state-of-the-art curriculum, foundation programs are fully prepared in-line with technology and industry requirement.

## Better Future

i-Vidya focuses on providing good basics and foundation to the kids, so kids can choose the area they are passionate about. This helps them secure better future.

# ABOUT OUR PROGRAM

Complete program is of 5-years duration. It has been sampled annually, based on age group of the kids. We start from very basic foundation and take kids till becoming tech savvy

## 1

During 1st year of the program we train students on fundamentals of computer and English language - soft skills.

## 2

During 2nd year of the program we train students on introduction to practical skills on domains like animation, agriculture, graphical design, web design, App development, Blog/Content writing, freelancing. Students will complete basic level projects or activities.

## 3

During 3rd year of the program we train students on specific domain which student is interested about or good at. For example if student is good graphical design, we engage them full time on graphical design and beginner level course on graphical design is provided. Students will complete a project on the course/domain chosen.

## 4

During 4th year of the program we train students on intermediate level of the course/domain chosen. Students are exposed to industry projects. Students will build at least one project used in the actual industry. Students will be involved in national/global level competitions.

## 5

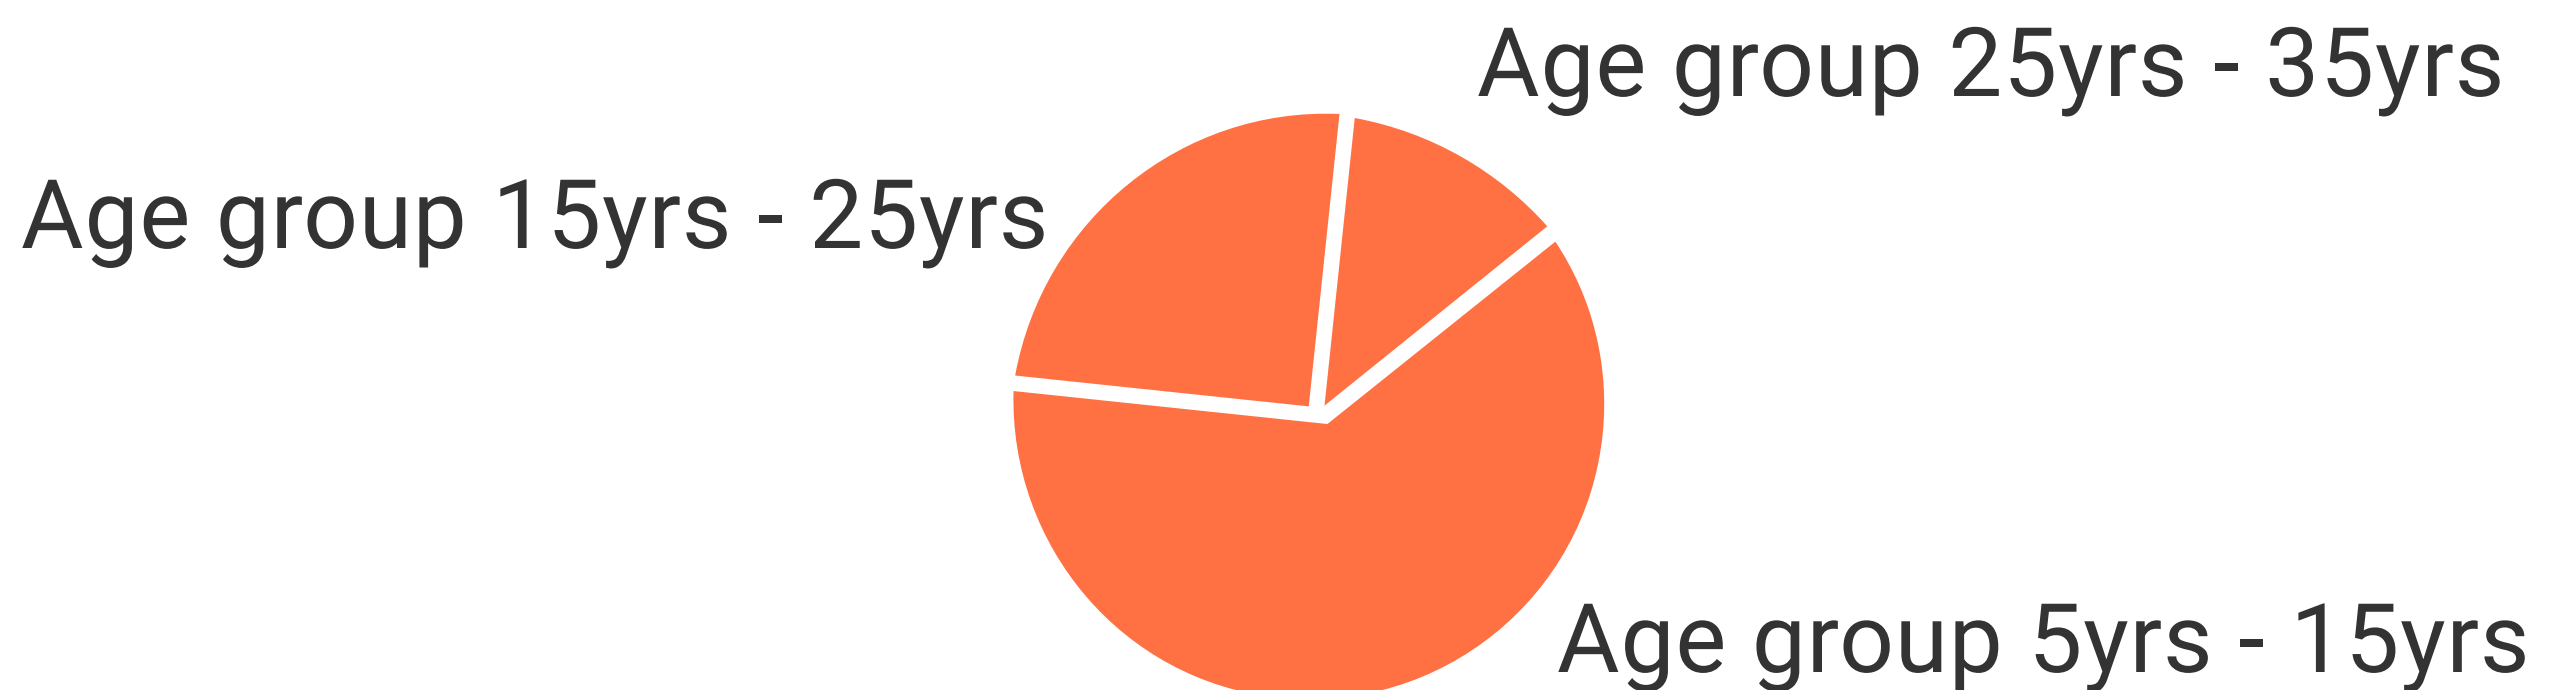

During 5th year of the program we train students on advance level of the course/domain chosen. Students are connected with industry mentors, they will work on industry projects or host own projects. They will get familiar with freelancing platforms and start improving their skills

# Students

## Creative Thinking

By Age Group

# Students

$(a+b)^2$

- Students can't learn actual coding in few weeks/months, whereas in i-Vidya they get gradual support to learn along with their academics.

- Students make finding solutions to problems as their habit, we provide lot of activities, practical problems to solve.

- Tests on weekly and monthly basis to evaluate the understanding level of the students. Quiz competitions district level, state level and encouraged to attend global level events.

- Students learn multiple skills, which help them explore the technology world and can have better and secured future ahead.

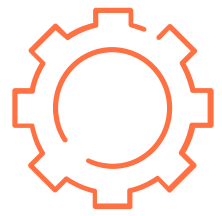

- Students get access to create their profiles in best leading tech platforms, which helps in creating public visibility in professional world.

# School

## Benefit for schools

i-Vidya will be industry partner to schools, to help implement exhibitions, fun fares, providing mentoring to students in school projects and also to create attention to parent.

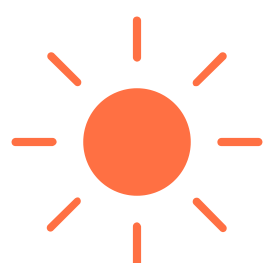

As new National Education Policy (NEP) focuses more on skill based education. This partnership helps school to stay a step ahead of implementation.

i-Vidya will provide access to maintain track of their students after they completed the schooling, this helps in building the alumni network and reputation of the institute.

Advanced LMS for schools to conduct online classes, assignments, home work, online quiz, online test, graphical content teaching and also to digitalized engagement with students.

i-Vidya provides branding support for schools, by providing school visibility in i-Vidya platforms. Introducing schools to industrial forums. This helps in attracting more admissions.
